

Session 3: Module Implementation (REPORT)

The objective of this session is to document the implementation of the module selected and specified in the previous session.

1. Changes to initial specification

You have already specified your module in the previous session. Summarize the changes in the initial specification

Your description may include a table with the list of changes.

If the changes are significant, include the new specification in terms of:

- a. Textual description of the module. Examples.
- b. Diagram/s of the module and its internal structure
- c. Definition of inputs and outputs of the module
- d. Definition of inputs and outputs of the internal sub-modules
- e. ...

2. Verification

List the set of test vectors (i.e. inputs and expected outputs) used. Show the correct functioning of the model through these results (e.g. waveforms, screen printouts).

3. References

List the sources of information you have used.
